

Anatomy of a Flower

Kids can learn about the parts of a flower with this activity by dissecting the flower.

What You Will Need:

- A flower like tulip
- Paper card
- Tape

Instructions:

- Let the kids start by tearing out the leaf of the flower.
- Ask them to tape it on the paper card.
- They can then proceed with the petals, stamen, pistil, sepal and stem.
- As they tear out each part, it has to be taped on the card.
- Explain that the powdery residue is the pollen.
- You can help them label the parts.
